

NUMBER OF UNIQUE IP ADDRESSES SERVED

Another measure of increased utilization is an expanding population of IP addresses using NaukaNet services each month. The graphic at right shows an almost 3x increase in the number of Russian IP addresses since the new network began operation in December. The number of European machines accessing/interacting these machines has more than doubled; and the number of US machines has nearly doubled since October 2001.

Further, the numbers here represent machines that have participated in flows that have exceeded 25K – thus eliminating many casual web/email users.
